

# HOT WAX YOUR SKIS & SNOWBOARD

*A Library Survival Guide*

Hey! Did you tune your edges?  
Do that first!

1 Clean your base.  
You can use a brass  
brush, use citrus  
cleaner, or "hot  
scrape it!"

A

Brass Brush: With firm brush strokes,  
work down your board.

B

Citrus Cleaner: Apply cleaner to base  
and wipe with cloth.

C

Hot Scrape: Apply hot wax, run iron  
over base, then scrape off wax  
immediately.

2 Hold wax against  
the iron and let hot  
melted wax drip on  
base or 'crayon' it  
on.

2

3

Run iron over the base with constant motion, getting entire base covered in wax

4

Enjoy a brew while you let wax cool for about 30 mins. You've earned it :)

We wax our boards to protect them as well as to glide fast; the base of your board has a "structure" that absorbs wax. To the observer it has striations that we want to see at the end of this process.

5

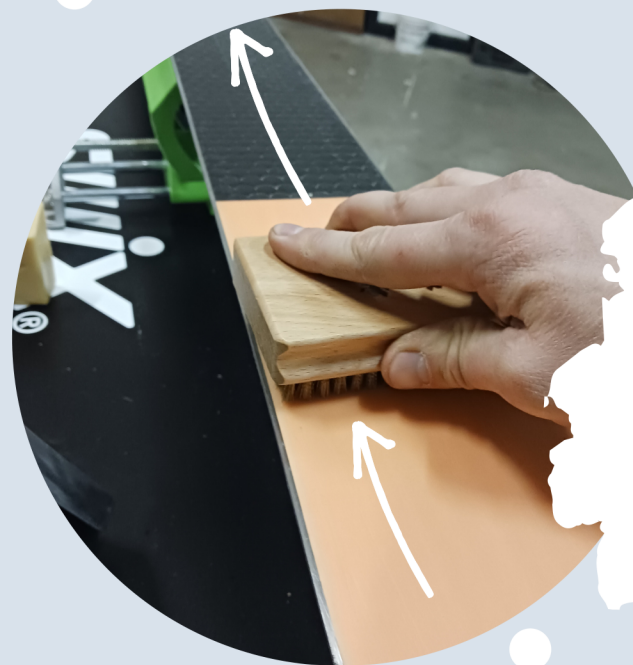

Scrape wax off base with plastic scraper. Keep scraping until no wax comes off!

Don't worry--you are not undoing all your work! You are simply scraping off any excess wax that didn't absorb into the base.

6

Brush base with a horse hair brush (or nylon brush) tip to tail

**NOW GO SHRED SOME POW!**
